Buy Backs

This will entail a weekly buy back once randomly throughout the week. We will be spending 0.2 WETH on these buybacks. With this assumption we will be able complete 16 buy backs before running out of DAO funds. This can all be changed in Q-2 and we presume we will have more funds obtained from OpenSea fees and token taxes. We will be deciding on a defined number with the DAO on what the royalties should be for OpenSea. These royalties will be used for further buybacks on the nfts and to grow the project further.

Burn Contests

Along with this we will be hosting burn contests to further incentivize our holders on burning extra supply. These burn contests work by giving a two day time frame where our holders will burn their nfts for the chance of winning a great prize. We will be giving out Matic, MetaMunks, $BANANA and much more to ensure its worth it for you to burn your nfts!

Games 4 Burn

This part of our project will allow us to play games where the entry will be a burn fee (we can do nft or token burning). We will play games such as poker, smash carts, ect.

Buyback Timeline

- [ ] Buy back of 0.2 within 3 days of sell out
- [ ] Second buy back of 0.2
- [ ] Third buy back of 0.2
- [ ] Fourth buy back of 0.2

We will fill out the rest of this timeline once the first buy back has commenced
